

Optimize your mainframe asset

The Workload Manager (WLM) replaces the old ICS/IPS method of categorizing and managing work on IBM mainframes. The last release supporting ICS/IPS is OS/390 Release 2.10. If you have not converted your ICS/IPS to WLM and plan to move on to z/OS, Schunk IT Consulting's Workload Manager Services is for you!

If you have already converted to WLM, you are likely aware that configurations require periodic review, not only to make sure the configuration is correct, but to take advantage of new WLM features and capabilities, such as IDRT (Independent Disaster Recovery Testing).

Schunk-IT Consulting can:

- Perform WLM conversion.
- Clean up inappropriate workload specifications.
- Review the WLM configuration to ensure it is complete, correct and effective.
- Analyze and recommend appropriate WLM capabilities.
- Explain WLM to technical and management audiences.
- Establish meaningful reporting procedures and provide interpretative guidelines.

Call Schunk-IT Consulting *today* to learn how Workload Manager Services can help you!
